

The circumbinary disc around the J-type C-star IRAS 18006–3213

Pieter Deroo, KULeuven

- main question:
How do we explain a O-rich circumstellar environment around the C-star IRAS 18006-3213.
- MIDI shows:
 - compact IR emission
 - asymmetric IR emission
- conclusion:
The O-rich material is stored in a stable circumstellar disc around the C-rich photosphere
