

10 μ m Interferometry of the Disk and Wind of the Massive Young Star MWC 349A

Simon Albrecht, Andreas Quirrenbach, Robert N. Tubbs

MWC349A is a fascinating object:

- . Dense neutral Keplerian disk
nearly edge-on**
- . Hydrogen recombination line maser
kinematically associated with disk**
- . Ionized wind
likely due to photo-evaporation of disk**
- . Disagreement in literature about:
evolutionary status, luminosity, and distance**
